

Abstract

A unique design for portable cases for the display of art, craft and trade objects is described. The design is for portable display cases that are multi-functional and more useful to the artisan than existing art display techniques. The portable display cases are durable, lightweight, and are capable of easy placement into multiple arrays. They can be finished in a variety of attractive appearances to better feature the displayed object and match the needs of the user. Furthermore the portable display cases can be nested for ease of transport, they are stackable for appearance and they can be made fire retardant. Finally and of additional importance to the user, they can be used to store and transport the items meant for display. This design feature effectively reduces the risk of theft or damage to the art, craft or trade objects during transport or storage. Finally the manufacture of the cases is simple, inexpensive and customizable to meet the needs of the user.
